Notes

Zone 1: Comprised of land having a less than 1 in 1,000 annual probability of river or sea flooding in any year.

Zone 2: Comprised of land having between a 1 in 100 and 1 in 1,000 annual probability of river flooding or 1 in 200.

Zone 3a: This zone comprises land assessed as having a greater than 1 in 100 annual probability of river flooding.

Zone 3b: This zone comprises land where water has to flow or be stored in times of flood (the functional floodplain). The SFRA identified this Flood Zone as land which would flood with an annual probability of 1 in 20 years, where detailed modelling exists. In the absence of detailed hydraulic model information, a precautionary approach has been adopted with the assumption that the extent of Flood Zone 3b would be equal to Flood Zone 3a. Areas where the precuationary approach has been applied indicated by the hatched extents. If development is shown to be in Flood Zone 3a where no Flood Zone 3b information exists, further work should be undertaken as part of a detailed site specific assessment to understand the extent of Flood Zone 3b
